DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 51-56 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 41 of U.S. Pub. 2002/0150075 (hereinafter referred as “Belcea”) in view of US Patent 6,856,807 (hereinafter referred as “Raith”).

Regarding claims 51-54 of the instant application, the limitations in these claims are disclosed in claim 41 of Belcea. On the other hand, claim 41 of Belcea does not disclose a transceiver means for transmitting and receiving signals from other like terminals of series of radio terminals, a computer means, and a memory means for storing program software for processing by the computer means. However, Raith discloses a transceiver means for transmitting and receiving signals from other like terminals of series of radio terminals, a computer means, and a memory means for storing program software for processing by the

Art Unit: 2616

computer means (see Fig. 1, elements 22, 24, 38, and 40, col. 2, lines 45-58). At the time of the invention, it would have been obvious to a person of ordinary skill in the art to combine the transceiver, computer means, and the memory means for storing program software teaching by Raith with Belcea. The motivation for doing so would have been to provide to update the current location of the terminal read on column 1, line 52. Therefore, it would have been obvious to combine Raith and Belcea to obtain the invention as specified in the claims 51-54.

Regarding claims 55 and 56 of the instant application, claim 41 of Belcea does not disclose updating means. However, Raith discloses updating means (see Fig. 1, col. 4, lines 1-13). At the time of the invention, it would have been obvious to a person of ordinary skill in the art to combine updating means teaching by Raith with Belcea. The motivation for doing so would have been to provide to enhance the function and utility of the wireless communication read on column 1, lines 26-27. Therefore, it would have been obvious to combine Raith and Belcea to obtain the invention as specified in the claims 55 and 56.

Response to Arguments

3. Applicant's arguments with respect to claims 51-53 have been considered but are moot in view of the new ground(s) of rejection.
